## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 10/3/2003 in compliances with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, 6-10, and 12-17 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 7-308087.

With respect to the claims, the Japanese publication shows in figures 1-3 a diode-rectifying unit 1, a capacitor 4, a resistor 3, an inverter 5, a dynamic braking circuit 8, and a relaying unit (2a and 6) for dynamic braking a motor 9.

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 3-5 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 7-308087 in view of JP 11-206184, or Ono (6,653,806), or Prior Art Figure 1.

Whereas, claims 3-5 and 11 further require the inverter circuits has a pair of inverting elements comprising a transistor and a diode connected to the transistor in parallel. However, the Japanese publication JP 11-206184, Ono, and Prior Art Figure 1 show the transistor and the diode connected to the transistor in parallel, and the dynamic braking circuit is separated units. Since the use of transistor and diode connected in parallel or a separate dynamic braking circuit in alternative is notorious old in the art, it would have been obvious to modify the Japanese publication JP 7-308087 with a separate dynamic braking circuit as taught or suggested by JP 11-206184, or Ono, or Prior Art Figure 1 in place of the dynamic braking circuit 8 of the Japanese publication 7-308087.

#### *Citation of Pertinent References*

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents and publications to Fry et al (3,991,352), Murty et al (5,291,106), Makinen et al (4,672,277), Plunkett (4,093,900), King (6,331,365), Mizuno (6,611,126), Wu (5,471,125), and JP 8-23601 disclose dynamic braking control systems comprising a dynamic braking unit and an inverter comprising transistor and diode pairs.
